              artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, SalI,Pstl). NOTE: Also due to the cloning system used Blue/white selection for recombinats is not 100% reliable."

/_com__ind=_nu_Bluescript SK+; Site 1: EcoR1 (5'-end of cDNA); Site 2: XhoI (3'-end of cDNA); Due to a cloning arrefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, SalI, PStI). NOTE: Also due to the cloning system used Blue/white selection for kcombinats is not 100% reliable.Average insert size is 1 kb.

/dlone lib="C. reinhardtii CC-1690, Deflagellation
/normalized), Lambda Zap II"
/note="Vector: pBluescript II SK-; Site I: ECORI; Site 2:
XhoI; Deflagellation library, constructed by John Davies
and Jeffrey McDermott, combines cDNAs from CC-1690 cells
which had been re-synthesizing flagella for 15, 30 and 60
min after being deflagellated by pH shock. PolyA mRNA was
purified from each sample, pooled and cDNA synthesized.
The cDNA was directionally cloned into lambda Zap II
(Stratagene) in the EcoRI (5') and XhoRI (3') sites.
pBluescript II SK- plasmids were excised from the lambda
ZAP clones by superinfection with ExAssist (Stratagene)
phage. The library was normalized using method 4 described
in Bonaldo et al., (1996) Genome Research 6: 791-806."
